## Authentication

1. Signup for api access on <https://oauth.developers.visma.com/>. Details (<https://developer.visma.com/api/dev-portal-tutorial/>)
2. Obtain an Api access token using the clientId and clientSecret generated at the previous step. <https://oauth.developers.visma.com/service-registry/documentation/authentication>

POST /connect/token HTTP/1.1

Host: [connect.visma.com](https://connect.visma.com)

Content-Type: application/x-www-form-urlencoded

Content-Length: 187

client\_id=ApplicationId - created on [developers.visma.com](https://developers.visma.com)

client\_secret=yyyyyyyyyyyyyyyyyyyy

grant\_type=client\_credentials

tenant\_id=xxxxxxxxxxxxxx

2. Find the desired endpoint. <https://controlapi.control.visma.com/swagger/index.html>

3. Make the call to the endpoint passing the obtained access token. The token must be sent in the HTTP header of every subsequent call and it has a validity of one hour. After one hour a new token must be requested.

GET /api/account/get-accounts HTTP/1.1

Host: [controlapi.control.visma.com](https://controlapi.control.visma.com)

StorageSpaceId: xxxxxxxxxxxxxxxx

Authorization: Bearer

## Account

Get method : /api/account/get-accounts

This method will return a list of the accounts.

Field	Datatype	Size	Comment
<b>name</b>	String	30	Accountname
<b>accountNumber</b>	String	6	Accountnumber
<b>accClass</b>	String	1	Accountclass
<b>accType</b>	Int		Accounttype. 1=Acquiring account, 2=Debt account, 3=Revenue account, 4=Expense account
<b>standard</b>	Byte		Account function
<b>userGroup1</b>	String	8	From usergroups of type ACCOUNT1
<b>userGroup2</b>	String	8	From usergroups of type ACCOUNT2
<b>userGroup3</b>	String	8	From usergroups of type ACCOUNT3
<b>userGroup4</b>	String	8	From usergroups of type ACCOUNT4
<b>userGroup5</b>	String	8	From usergroups of type ACCOUNT5
<b>userGroup6</b>	String	8	From usergroups of type ACCOUNT6
<b>userGroup7</b>	String	8	From usergroups of type ACCOUNT7
<b>userGroup8</b>	String	8	From usergroups of type ACCOUNT8
<b>userGroup9</b>	String	8	From usergroups of type ACCOUNT9
<b>userGroup10</b>	String	8	From usergroups of type ACCOUNT10
<b>userGroup11</b>	String	8	From usergroups of type ACCOUNT11
<b>userGroup12</b>	String	8	From usergroups of type ACCOUNT12
<b>userGroup13</b>	String	8	From usergroups of type ACCOUNT13
<b>userGroup14</b>	String	8	From usergroups of type ACCOUNT14
<b>userGroup15</b>	String	8	From usergroups of type ACCOUNT15
<b>userGroup16</b>	String	8	From usergroups of type ACCOUNT16
<b>userGroup17</b>	String	8	From usergroups of type ACCOUNT17
<b>userGroup18</b>	String	8	From usergroups of type ACCOUNT18
<b>userGroup19</b>	String	8	From usergroups of type ACCOUNT19
<b>userGroup20</b>	String	8	From usergroups of type ACCOUNT20
<b>vatCode</b>	Byte		Vatcode that is used for account
<b>accGroup</b>	String	2	Accountgroup
<b>useCurrency</b>	Byte		0=Never use currency, 1=Can use currency, 2=Must use currency
<b>currency</b>	String	3	Currency used for account
<b>replaceAcc</b>	String	6	Account that is used if account is disabled
<b>sign</b>	Byte		0=Can use both -/, 1=debit, 2=kredit
<b>created</b>	Datetime		When the account was created
<b>disabledDate</b>	Datetime		When the account was disabled
<b>o1</b>	Int		0=Never use object type 1, 1=Can use object type 1, 2=Must use object type 1
<b>o2</b>	Int		0=Never use object type 2, 1=Can use object type 2, 2=Must use object type 2
<b>o3</b>	Int		0=Never use object type 3, 1=Can use object type 3, 2=Must use object type 3
<b>o4</b>	Int		0=Never use object type 4, 1=Can use object type 4, 2=Must use object type 4
<b>o5</b>	Int		0=Never use object type 5, 1=Can use object type 5, 2=Must use object type 5
<b>o6</b>	Int		0=Never use object type 6, 1=Can use object type 6, 2=Must use object type 6
<b>o7</b>	Int		0=Never use object type 7, 1=Can use object type 7, 2=Must use object type 7
<b>o8</b>	Int		0=Never use object type 8, 1=Can use object type 8, 2=Must use object type 8
<b>useO1</b>	String	8	Use this object of type 1
<b>useO2</b>	String	8	Use this object of type 2
<b>useO3</b>	String	8	Use this object of type 3
<b>useO4</b>	String	8	Use this object of type 4
<b>useO5</b>	String	8	Use this object of type 5
<b>useO6</b>	String	8	Use this object of type 6
<b>useO7</b>	String	8	Use this object of type 7
<b>useO8</b>	String	8	Use this object of type 8
<b>useNum</b>	Byte		0=Never use quantity, 1=Can use quantity, 2=Always use quantity
<b>prop</b>	Int		Bit field. 1)
<b>uac</b>	int		User Access Code

1)

Value	Comment
0	If account is used for assets
1	If account is used for supplierledgers
2	If account is used for customerledgers
3	If account is used for manual bookings
4	If account is used for budget
5	If account is used for currencyevaluation

## Get method : /api/account/get-by-id

This method will return one account.

Inputfield	Datatype	Size	Comment
accountnumber	String	6	Account number

<b>useO7</b>	String	8	Use this object of type 7
<b>useO8</b>	String	8	Use this object of type 8

### Note

If fields are not filed then the value will be overwritten with blank value.

Field	Datatype	Comment
	Bool	True / False

Get method : /api/account/vat/get-vats

This method will return all the vat codes.

Field	Datatype	Size	Comment
<b>vatcode</b>	Byte		Vatcode. Id used in Visma Control
<b>vatname</b>	String	255	Description
<b>vataccount</b>	String	6	Account. Must exist in account register
<b>vattransfer</b>	String	6	Clearing account. Must exist in account register
<b>vatpercent1</b>	Numeric	28,8	Vat before vatswap
<b>vatpercent2</b>	Numeric	28,8	Vat after vatswap
<b>vatswap</b>	Datetime		Date when vat is changed
<b>group1</b>	String	8	From usergroups of type VAT1
<b>group2</b>	String	8	From usergroups of type VAT2
<b>group3</b>	String	8	From usergroups of type VAT3
<b>group4</b>	String	8	From usergroups of type VAT4
<b>langtext</b>	String	8	Language id for translation. Refers to languagetext.id

## Article

Get method : /api/article/get-articels

This method will return all the articles.

Field	Datatype	Size	Comment
<b>id</b>	String	20	Id of article
<b>Name</b>	String	80	Name
<b>Artgroup</b>	String	20	Articlegroup
<b>Calcprice</b>	Numeric	28,8	Calculatedprice
<b>Unit</b>	String	8	Unit
<b>account1</b>	String	6	Account
<b>account2</b>	String	6	Account
<b>account3</b>	String	6	Account
<b>account4</b>	String	6	Account
<b>account5</b>	String	6	Account
<b>account6</b>	String	6	Account
<b>o1</b>	String	8	Object of type 1
<b>o2</b>	String	8	Object of type 2
<b>o3</b>	String	8	Object of type 3
<b>o4</b>	String	8	Object of type 4
<b>o5</b>	String	8	Object of type 5
<b>o6</b>	String	8	Object of type 6
<b>o7</b>	String	8	Object of type 7
<b>o8</b>	String	8	Object of type 8
<b>supplier</b>	String	30	Supplierid
<b>supplierartno</b>	String	30	Supplier articleno
<b>group1</b>	String	8	From usergroups of type vourow1
<b>group2</b>	String	8	From usergroups of type vourow2
<b>group3</b>	String	8	From usergroups of type vourow4
<b>group4</b>	String	8	From usergroups of type vourow5
<b>discountrow</b>	Int		Discount
<b>art1</b>	String	8	From usergroups of type art1
<b>art2</b>	String	8	From usergroups of type art2
<b>art3</b>	String	8	From usergroups of type art3
<b>art4</b>	String	8	From usergroups of type art4
<b>disabled</b>	Byte		0 = not disable, 1 = disable
<b>uac</b>	Int		User Access Code

Get method : /api/article/get-article-by-id

This method will return one article.

Inputfield	Datatype	Size	Comment
articleid	String	20	Id of article

Field	Datatype	Size	Comment
<b>id</b>	String	20	Id of article
<b>Name</b>	String	80	Name
<b>Artgroup</b>	String	20	Articlegroup
<b>Calcprice</b>	Numeric	28,8	Calculatedprice
<b>Unit</b>	String	8	Unit
<b>account1</b>	String	6	Account
<b>account2</b>	String	6	Account
<b>account3</b>	String	6	Account
<b>account4</b>	String	6	Account
<b>account5</b>	String	6	Account
<b>account6</b>	String	6	Account
<b>o1</b>	String	8	Object of type 1
<b>o2</b>	String	8	Object of type 2
<b>o3</b>	String	8	Object of type 3
<b>o4</b>	String	8	Object of type 4
<b>o5</b>	String	8	Object of type 5
<b>o6</b>	String	8	Object of type 6
<b>o7</b>	String	8	Object of type 7
<b>o8</b>	String	8	Object of type 8
<b>supplier</b>	String	30	Supplierid
<b>supplierartno</b>	String	30	Supplier articleno
<b>group1</b>	String	8	From usergroups of type vourow1
<b>group2</b>	String	8	From usergroups of type vourow2
<b>group3</b>	String	8	From usergroups of type vourow4
<b>group4</b>	String	8	From usergroups of type vourow5
<b>discountrow</b>	Int		Discount
<b>art1</b>	String	8	From usergroups of type art1
<b>art2</b>	String	8	From usergroups of type art2
<b>art3</b>	String	8	From usergroups of type art3
<b>art4</b>	String	8	From usergroups of type art4
<b>disabled</b>	Byte		0 = not disable, 1 = disable
<b>uac</b>	Int		User Access Code

## Post method : /api/article/create-or-update-article

This method will create or update an article.

Inputfield	Datatype	Size	Comment
<b>id</b>	String	20	Id of article
<b>Name</b>	String	80	Name
<b>Artgroup</b>	String	20	Articlegroup
<b>Calcprice</b>	Numeric	28,8	Calculatedprice
<b>Unit</b>	String	8	Unit
<b>account1</b>	String	6	Account
<b>account2</b>	String	6	Account
<b>account3</b>	String	6	Account
<b>account4</b>	String	6	Account
<b>account5</b>	String	6	Account
<b>account6</b>	String	6	Account
<b>o1</b>	String	8	Object of type 1
<b>o2</b>	String	8	Object of type 2
<b>o3</b>	String	8	Object of type 3
<b>o4</b>	String	8	Object of type 4
<b>o5</b>	String	8	Object of type 5
<b>o6</b>	String	8	Object of type 6
<b>o7</b>	String	8	Object of type 7
<b>o8</b>	String	8	Object of type 8
<b>supplier</b>	String	30	Supplierid
<b>supplierartno</b>	String	30	Supplier articleno
<b>group1</b>	String	8	From usergroups of type vrouw1
<b>group2</b>	String	8	From usergroups of type vrouw2
<b>group3</b>	String	8	From usergroups of type vrouw4
<b>group4</b>	String	8	From usergroups of type vrouw5
<b>discountrow</b>	Int		Discount
<b>art1</b>	String	8	From usergroups of type art1
<b>art2</b>	String	8	From usergroups of type art2
<b>art3</b>	String	8	From usergroups of type art3
<b>art4</b>	String	8	From usergroups of type art4
<b>disabled</b>	Byte		0 = not disable, 1 = disable
<b>uac</b>	Int		User Access Code

## AzureAttachment

Get method : /api/attachment/download-attachment

This method will return the binarydata of the file.

Inputfield	Datatype	Comment
<b>id</b>	String	Attachment internal id
<b>fileName</b>	String	Filename

Field	Datatype	Comment
<b>Content</b>	Byte[]	File content
<b>ContentType</b>	String	Filetype

Get method : /api/attachment/get-voucher-attachments

This method will return a list of filenames.

Inputfield	Datatype	Comment
<b>vouno</b>	Int	Voucher number
<b>serie</b>	String	Voucher serie
<b>yearno</b>	Int	Year number

Field	Datatype	Comment
<b>filename</b>	String	Filename
<b>id</b>	String	Id to be used with metod /api/attachment/download-attachment

Get method : /api/attachment/get-voucher-row-attachments

This method will return a list of filenames.

Inputfield	Datatype	Comment
<b>vouno</b>	Int	Voucher number
<b>serie</b>	String	Voucher serie
<b>yearno</b>	Int	Year number
<b>rowno</b>	Int	Voucher row number

Field	Datatype	Comment
<b>filename</b>	String	Filename
<b>id</b>	String	Id to be used with metod /api/attachment/download-attachment

## Get method : /api/attachment/get-ledger-attachments

This method will return the filenames.

Inputfield	Datatype	Size	Comment
invno	Int		Invoice number
enumerator	String	8	Invoice serie

Field	Datatype	Comment
filename	string	Filename
id	Int	Id to be used with metod /api/attachment/download-attachment

## Get method : /api/attachment/get-invoice-attachments

This method will return the filenames.

Inputfield	Datatype	Size	Comment
invnumber	Int		Invoice number
invserie	String	8	Invoice serie

Field	Datatype	Comment
filename	string	Filename
id	Int	Id to be used with metod /api/attachment/download-attachment

## Budgettype

Get method: /api/budgettype/get-budgettype-by-phisical-number

This method gets the budgettype based on the physical number.

Inputfield	Datatype	Size	Comment
number	Int		Budgettype number

Field	Datatype	Comment
<b>budgettypeID</b>	String	Budget number
<b>budgettypeName</b>	String	Budget type name
<b>distributionKey</b>	String	Default distribution key
<b>yearID</b>	Int	Year for which the budget is used

## BusinessUnit

Get method : /api/businessunit/get-businessunits

This method will return a list of Companies.

Field	Datatype	Size	Comment
<b>no</b>	String	8	Companyid
<b>name</b>	String	30	Name of company
<b>address1</b>	String	40	Address field 1
<b>address2</b>	String	40	Address field 2
<b>address3</b>	String	40	Address field 3
<b>address4</b>	String	40	Address field 4
<b>phone1</b>	String	30	Phone field 1
<b>phone2</b>	String	30	Phone field 2
<b>phone3</b>	String	30	Phone field 3
<b>number</b>	String	30	Company regnumber
<b>vatno</b>	String	30	Vatregistrationnumber
<b>companytype</b>	String	20	Type of business
<b>missiontype</b>	String	20	Task type
<b>branchtype</b>	String	20	Branch of industry
<b>firstreg</b>	Datetime		First action
<b>lastreg</b>	Datetime		Latest action
<b>endperiod</b>	String	8	Period when the accounting year ends
<b>vatperiods</b>	Byte		Number of periods in each VAT reporting block
<b>o1</b>	String	8	Object of type 1
<b>o2</b>	String	8	Object of type 2
<b>o3</b>	String	8	Object of type 3
<b>o4</b>	String	8	Object of type 4
<b>o5</b>	String	8	Object of type 5
<b>o6</b>	String	8	Object of type 6
<b>o7</b>	String	8	Object of type 7
<b>o8</b>	String	8	Object of type 8
<b>group1</b>	String	8	Group of type CLIENT1
<b>group2</b>	String	8	Group of type CLIENT2
<b>group3</b>	String	8	Group of type CLIENT3
<b>group4</b>	String	8	Group of type CLIENT4
<b>group5</b>	String	8	Group of type CLIENT5
<b>group6</b>	String	8	Group of type CLIENT6
<b>group7</b>	String	8	Group of type CLIENT7
<b>group8</b>	String	8	Group of type CLIENT8
<b>group9</b>	String	8	Group of type CLIENT9
<b>group10</b>	String	8	Group of type CLIENT10
<b>group11</b>	String	8	Group of type CLIENT11
<b>group12</b>	String	8	Group of type CLIENT12
<b>group13</b>	String	8	Group of type CLIENT13
<b>group14</b>	String	8	Group of type CLIENT14
<b>group15</b>	String	8	Group of type CLIENT15
<b>group16</b>	String	8	Group of type CLIENT16
<b>group17</b>	String	8	Group of type CLIENT17
<b>group18</b>	String	8	Group of type CLIENT18
<b>group19</b>	String	8	Group of type CLIENT19
<b>group20</b>	String	8	Group of type CLIENT20
<b>disabled</b>	Datetime		When company is disabled from
<b>basecurrency</b>	String	3	Alternative currency
<b>countrycode</b>	String	8	Country code

## Container

Get method : /api/container/get-byyear

This method returns a list of netted information.

Inputfield	Datatype	Comment
<b>year</b>	Int	Year number
<b>startPeriod</b>	Int	Start period number
<b>endPeriod</b>	Int	End period number
<b>page</b>	Int	0 is first page

Field	Datatype	Size	Comment
<b>id</b>	Int		Dummy used for indexing
<b>baseamount</b>	Decimal	28,8	Alternativ amount
<b>period</b>	Byte		Period (1 – 12)
<b>type</b>	Short		1)
<b>account</b>	String	6	Account. Must exist in accountx
<b>cid</b>	String	8	Company
<b>year</b>	Short		Year. Same as yearno in periodx
<b>amount</b>	Decimal	28,8	Amount
<b>foramount</b>	Decimal	28,8	Foreign amount
<b>number</b>	Decimal	28,8	Number
<b>basescurrency</b>	String	3	Alternative currency
<b>model</b>	String	8	Distribution key used for budget
<b>currency</b>	String	3	Currency

<b>10</b>	Simulation vouchers
<b>100 - 30000</b>	If account is used for budget
<b>5</b>	Range is used for varius budget types

2)

Value	Comment
<b>0</b>	Budget doesn't update the year balance
<b>1</b>	Budget updates the year balance

## Currency

Get method : /api/currency/get-currencies

This method returns a list of all currencies.

Field	Datatype	Size	Comment
<b>currencyId</b>	String	3	Id
<b>description</b>	String	30	Description
<b>recalc1</b>	Decimal	28,8	Purchase price, first recalculation
<b>recalc2</b>	Decimal	28,8	Purchase price, second recalculation
<b>recalc3</b>	Decimal	28,8	Sales price, first recalculation
<b>recalc4</b>	Decimal	28,8	Sales price, second recalculation
<b>changed</b>	Datetime		Date of last modification
<b>recalcAccount</b>	String	6	Account. Must exist in accountx
<b>linked</b>	String	3	Currency linked to the current one

Get method : /api/currency/get-currencies-with-rates

This method returns a list of all currencies with exchangerates

Field	Datatype	Size	Comment
<b>currencyId</b>	String	3	Id
<b>description</b>	String	30	Description
<b>recalc1</b>	Decimal	28,8	Purchase price, first recalculation
<b>recalc2</b>	Decimal	28,8	Purchase price, second recalculation
<b>recalc3</b>	Decimal	28,8	Sales price, first recalculation
<b>recalc4</b>	Decimal	28,8	Sales price, second recalculation
<b>Changed</b>	Datetime		Date of last modification
<b>recalcAccount</b>	String	6	Account. Must exist in accountx
<b>Linked</b>	String	3	Currency linked to the current one
<b>sellExchange</b>	Decimal	28,8	Sale price
<b>buyExchange</b>	Decimal	28,8	Purchase price
<b>validFrom</b>	Datetime		Exchange rate start date

## FixedAsset

Get method : /api/asset/get-assets

This method will return a list of fixed assets.

Field	Datatype	Comment
<b>noapartments</b>	Int	
<b>assetcategory</b>	Byte	Assetcategory
<b>assetstatus</b>	Byte	1)
<b>cid</b>	String	8 Company
<b>ownerassetno</b>	Int	Owner assetno, or -1 if there is no owner
<b>assetno</b>	Int	Assetid
<b>buyamount</b>	Decimal	28,8 Purchase amount
<b>extraamount1</b>	Decimal	28,8 Extra amount
<b>extraamount2</b>	Decimal	28,8 Extra amount
<b>sellvouno</b>	Int	Vouchernumber if asset sold
<b>insuranceamount</b>	Decimal	28,8 Insurance amount
<b>replacementvalue</b>	Decimal	28,8 Replacement value
<b>estsellamount</b>	Decimal	28,8 Estimated sell amount
<b>taxvalueyear</b>	Short	Year of valuation
<b>taxvaluedwelling</b>	Decimal	28,8 Tax value for buildings
<b>taxvaluepremises</b>	Decimal	28,8 Tax value for premises
<b>taxvaluehouse</b>	Decimal	28,8 Tax value for ??
<b>taxvaluehouselfand</b>	Decimal	28,8 Tax value for ??
<b>taxvalueapartmentland</b>	Decimal	28,8 Tax value for ??
<b>taxvaluefacility</b>	Decimal	28,8 Tax value
<b>uac</b>	Int	Tax value for facility
<b>buyforamount</b>	Decimal	28,8 Purchase forign amount
<b>sellamount</b>	Decimal	28,8 Sell amount
<b>sellvoutype</b>	String	8 Voucherserie for sell voucher
<b>selldate</b>	Datetime	Date for asset sale/discardng
<b>o1debit</b>	String	8 Debet object 1 for internal interest
<b>o2debit</b>	String	8 Debet object 2 for internal interest
<b>o3debit</b>	String	8 Debet object 3 for internal interest
<b>o4debit</b>	String	8 Debet object 4 for internal interest
<b>o5debit</b>	String	8 Debet object 5 for internal interest
<b>o6debit</b>	String	8 Debet object 6 for internal interest
<b>o7debit</b>	String	8 Debet object 7 for internal interest
<b>o8debit</b>	String	8 Debet object 8 for internal interest
<b>o1credit</b>	String	8 Credit object 1 for internal interest
<b>o2credit</b>	String	8 Credit object 2 for internal interest
<b>o3credit</b>	String	8 Credit object 3 for internal interest
<b>o4credit</b>	String	8 Credit object 4 for internal interest
<b>o5credit</b>	String	8 Credit object 5 for internal interest
<b>o6credit</b>	String	8 Credit object 6 for internal interest
<b>o7credit</b>	String	8 Credit object 7 for internal interest
<b>o8credit</b>	String	8 Credit object 8 for internal interest
<b>intdebitacc</b>	String	8 Debet account for internal interest
<b>intcreditacc</b>	String	8 Credit account for internal interest
<b>intid</b>	String	8 Interest procedure for internal interest
<b>propown</b>	String	8 Type of ownership for real estate. Group of type ASSOWNER
<b>propcode</b>	String	8 Type for real estate. Group of type ASSBUILD
<b>intintstartdate</b>	Datetime	Startdate for internal rate calculation
<b>intintlatestuse</b>	Datetime	Most recent date of internal interest rate booking
<b>changed</b>	Datetime	Date of latest change of asset
<b>statuschanged</b>	Datetime	Date of lastest change of status
<b>suppid</b>	String	12 Supplier id. Must exist in person table
<b>supplier</b>	String	80 Name of supplier
<b>label</b>	String	30 Marking
<b>responsible</b>	String	8 Administrator
<b>location1</b>	String	30 Location (eg room). Group of type ASSLOC1
<b>location2</b>	String	30 Location (eg building). Group of type ASSLOC2
<b>group1</b>	String	8 Group of type ASSET1

<b>group2</b>	String	8	Group of type ASSET3

	User-defined depreciation methods should start with ID = 100

2)

Value	Comment
<b>1</b>	accounting depreciation
<b>2</b>	tax depreciation

3)

Value	Comment
<b>1</b>	according to plan
<b>2</b>	percentage
<b>3</b>	end date
<b>4</b>	no parameters (e.g. 30/20-rule)

4)

Value	Comment
<b>0</b>	if calculation is based on whole periods
<b>1</b>	calculation is day-based

## Get method : /api/asset/get-deprectypes

This method returns a list of asset depreciation types.

Field	Datatype	Size	Comment
deprectype1	String	8	Depreciation type id
deprecproc	Byte		Depreciation method
years	Int		Number of years for the depreciation methods according to plan
percentage	Decimal	28,8	Percentage for percentage-depreciation methohs
name	String	30	Name

## Get method : /api/asset/get-deprecrules

This method returns a list of asset depreciation rules.

Field	Datatype	Size	Comment
<b>deprecproc1</b>	Byte		Depreciation method of the depreciation type. Refers to deprecotype.deprecproc
<b>assetNo</b>	Int		Asset id
<b>deprecotype</b>	String	8	Depreciation type ID to which the rule belongs. Refers to deprecotype.deprecotype
<b>startdate</b>	Datetime		Start date for depreciation
<b>balanceaccount</b>	String	6	Balance account for the created vouchers
<b>balanceo1</b>	String	8	Balance object 1 for the created vouchers
<b>balanceo2</b>	String	8	Balance object 2 for the created vouchers
<b>balanceo3</b>	String	8	Balance object 3 for the created vouchers
<b>balanceo4</b>	String	8	Balance object 4 for the created vouchers
<b>balanceo5</b>	String	8	Balance object 5 for the created vouchers
<b>balanceo6</b>	String	8	Balance object 6 for the created vouchers
<b>balanceo7</b>	String	8	Balance object 7 for the created vouchers
<b>balanceo8</b>	String	8	Balance object 8 for the created vouchers
<b>resultaccount</b>	String	6	Profit/loss account for the created vouchers
<b>resulto1</b>	String	8	Profit/loss object 1 for the created vouchers
<b>resulto2</b>	String	8	Profit/loss object 2 for the created vouchers
<b>resulto3</b>	String	8	Profit/loss object 3 for the created vouchers
<b>resulto4</b>	String	8	Profit/loss object 4 for the created vouchers
<b>resulto5</b>	String	8	Profit/loss object 5 for the created vouchers
<b>resulto6</b>	String	8	Profit/loss object 6 for the created vouchers
<b>resulto7</b>	String	8	Profit/loss object 7 for the created vouchers
<b>resulto8</b>	String	8	Profit/loss object 8 for the created vouchers
<b>latestuse</b>	Datetime		Most recent use of the depreciation rule
<b>percentage</b>	Float		Percentage for percentage-type depreciation rules
<b>enddate</b>	Datetime		End date for the end-date-type depreciation rules
<b>minresidual</b>	Float		Minimal residual value
<b>prevdeprecstart</b>	Datetime		Date of the previous depreciation
<b>prevdeprecamount</b>	Float		Amount of the previous depreciation
<b>ruledone</b>	Int		0 – rule is done. 1 – rule is active

## GroupType

Get method : /api/grouptype/get-grouptypes

This method will return a list of usergroups.

Inputfield	Datatype	Comment
<b>page</b>	Int	Page to get. Default page is 0

Field	Datatype	Size	Comment
<b>typename</b>	String	10	Group type
<b>groupname</b>	String	8	Group id
<b>uac</b>	Int		User Access Code
<b>groupdesc</b>	String	20	Description
<b>text</b>	String	80	Freetext for group
<b>pageNumber</b>	Int		Page to fetch
<b>isCompleted</b>	Bool		True – more pages to fetch

# Invoice

Get method : /api/invoicelog/get-invoicelog-by-Id

This method will return a invoicelog.

Inputfield	Datatype	Size	Comment
invnumber	Int		Invoice number
invserie	string	8	Invoice serie

Field	Datatype	Size	Comment
<b>Head</b>			
<b>businessUnit</b>	String	8	Company. Refers to client.no
<b>serie</b>	String	8	Invoice serie
<b>invoiceNumber</b>	Int	12	Invoicenumber
<b>customerID</b>	String	40	Customer id. Refers to person.id
<b>address1</b>	String	40	Address line 1
<b>address2</b>	String	40	Address line 2
<b>address3</b>	String	40	Address line 3
<b>address4</b>	String	40	Address line 4
<b>address5</b>	String	40	Address line 5
<b>address6</b>	String	40	Address line 6
<b>address7</b>	String	40	Address line 7
<b>address8</b>	String	40	Address line 8
<b>termsOfPayment</b>	String	8	Terms of payment
<b>modofPayment</b>	String	8	Mode of payment
<b>invoiceDate</b>	Datetime		Invoiceing date
<b>dueDate</b>	Datetime		Due date (Can be NULL)
<b>invoiceType</b>	Byte		1 – ordinary invoice, 2 – credit invoice
<b>subType</b>	Byte		0 – ordinary invoice, 1 – summary invoice
<b>freeText</b>	String	255	Freetext on head
<b>ourreference</b>	String	30	Our reference
<b>yourreference</b>	String	30	Their reference
<b>account</b>	String	6	Account payable
<b>currency</b>	String	3	Currency
<b>o1</b>	String	8	Object of type 1
<b>o2</b>	String	8	Object of type 2
<b>o3</b>	String	8	Object of type 3
<b>o4</b>	String	8	Object of type 4
<b>o5</b>	String	8	Object of type 5
<b>o6</b>	String	8	Object of type 6
<b>o7</b>	String	8	Object of type 7
<b>o8</b>	String	8	Object of type 8
<b>yourOrderNo</b>	String	30	Their order number
<b>ourOrderNo</b>	String	30	Our order number
<b>group1</b>	String	8	Group type LEDGER1
<b>group2</b>	String	8	Group type LEDGER2
<b>interest</b>	String	8	Interest procedure
<b>language</b>	String	8	Language code of group type LANGID
<b>modOfDelivery</b>	String	8	Method of delivery of group type MOD
<b>termsOfDelivery</b>	String	8	Method of delivery of group type TOD
<b>periodicMonths</b>	Int		Number of periods over which the invoice amount should be periodically allocated
<b>startMonth</b>	Int		Relativ start month for periodic allocation
<b>Rows</b>			
<b>article</b>	String	30	Articel id
<b>freeText</b>	String	80	Freetext for the row
<b>account</b>	String	6	Sales account
<b>vatCode</b>	byte		Vat code for the row. 0-30
<b>vat</b>	Decimal	28,8	Vat amount in foreign amount
<b>quantity</b>	Decimal	28,8	Quantity
<b>aprice</b>	Decimal	28,8	Price per unit
<b>amount</b>	Decimal	28,8	Amount in domestic currency incluing tax

<b>forAmount</b>	Decimal	28,8	Amount in foreign currency incluing tax
<b>extraAmount</b>	Decimal	28,8	Extra amount
<b>discount</b>	Decimal	28,8	Discount in foreign amount
<b>o1</b>	String	8	Object of type 1
<b>o2</b>	String	8	Object of type 2
<b>o3</b>	String	8	Object of type 3
<b>o4</b>	String	8	Object of type 4
<b>o5</b>	String	8	Object of type 5
<b>o6</b>	String	8	Object of type 6
<b>o7</b>	String	8	Object of type 7
<b>o8</b>	String	8	Object of type 8
<b>group1</b>	String	8	Group of group type VOUROW1
<b>group2</b>	String	8	Group of group type VOUROW2
<b>group3</b>	String	8	Group of group type VOUROW3
<b>group4</b>	String	8	Group of group type VOUROW4
<b>type</b>	Byte		1)
<b>unit</b>	String	8	Unit of group type UNIT

1)

Value	Comment
0	normal row
1	total row, partial sum
2	total row
3	empty row

## Post method : /api/invoicelog/create-invoicelog

This method will create an invoicelog

Inputfield	Datatype	Size	Comment
<b>Head</b>			
<b>businessUnit</b>	String	8	Company. Refers to client.no
<b>serie</b>	String	8	Invoice serie
<b>invoiceNumber</b>	Int		Invoicenumber

1)

Value	Comment
<b>0</b>	normal row
<b>1</b>	total row, partial sum
<b>2</b>	total row
<b>3</b>	empty row

Field	Datatype	Comment
<b>invoiceNumber</b>	Int	Invoice number of created invoice
<b>errorNo</b>	Int	Error number
<b>errorDescription</b>	String	Error message

## Post method : /api/invoicelog/create-invoicelog-customer-details

This method will create an invoicelog. Customer details will be copied to theh invoicelog.

Inputfield	Datatype	Size	Comment
<b>Head</b>			
<b>businessUnit</b>	String	8	Company. Refers to client.no
<b>serie</b>	String	8	Invoice serie
<b>invoiceNumber</b>	Int		Invoicenumber
<b>customerID</b>	String	12	Customer id. Refers to person.id
<b>invoiceDate</b>	Datetime		Invoiceing date
<b>invoiceType</b>	Byte		1 – ordinary invoice, 2 – credit invoice
<b>freeText</b>	String	255	Freetext on head
<b>ourreference</b>	String	30	Our reference
<b>yourreference</b>	String	30	Their reference
<b>currency</b>	String	3	Currency
<b>transferInvoiceLog</b>	Bool		Transfer from log to invoice after creation
<b>Rows</b>			
<b>freeText</b>	String	80	Freetext for the row
<b>account</b>	String	6	Sales account
<b>vatCode</b>	Byte		Vat code for the row. 0-30
<b>vat</b>	Decimal	28,8	Vat amount in foreign amount
<b>quantity</b>	Decimal	28,8	Quantity
<b>aprice</b>	Decimal	28,8	Price per unit
<b>amount</b>	Decimal	28,8	Amount in domestic currency incluing tax
<b>forAmount</b>	Decimal	28,8	Amount in foreign currency incluing tax
<b>article</b>	String	20	Id of article
<b>o1</b>	String	8	Object of type 1
<b>o2</b>	String	8	Object of type 2
<b>o3</b>	String	8	Object of type 3
<b>o4</b>	String	8	Object of type 4
<b>o5</b>	String	8	Object of type 5
<b>o6</b>	String	8	Object of type 6
<b>o7</b>	String	8	Object of type 7
<b>o8</b>	String	8	Object of type 8
<b>type</b>	Byte		1)
<b>discount</b>	Int		Discount in foreign amount.

1)

Value	Comment
<b>0</b>	normal row
<b>1</b>	total row, partial sum
<b>2</b>	total row
<b>3</b>	empty row

Return values:

Field	Datatype	Comment
<b>invoiceNumber</b>	Int	Invoice number of created invoice
<b>errorNo</b>	Int	Error number
<b>errorDescription</b>	String	Error message

## Get method : /api/invoice/get-types

This method will return a list of invoice types.

Field	Datatype	Size	Comment
<b>type</b>	Short		1)
<b>usertype</b>	String	2	Name
<b>interest</b>	Byte		2)
<b>sort</b>	Byte		Iternal sort item
<b>description</b>	String	20	Description

1)

Value	Comment
<b>1</b>	invoice, customer invoice
<b>2</b>	credit, customer invoice
<b>3</b>	interest invoice, customer invoice
<b>4</b>	interest credit, customer invoice
<b>5</b>	on account, customer invoice
<b>6</b>	advance, customer invoice
<b>10</b>	final payment, customer invoice
<b>11</b>	partial payment, customer invoice
<b>12</b>	difference, customer invoice
<b>13</b>	cash discount, customer invoice
<b>14</b>	fee, customer invoice
<b>15</b>	matching, customer invoice
<b>16</b>	currency profit, customer invoice
<b>17</b>	currency loss, customer invoice
<b>-1</b>	invoice, supplier ledger
<b>-2</b>	credit, supplier ledger
<b>-3</b>	on account, supplier ledger
<b>-4</b>	advance, supplier ledger
<b>-10</b>	final payment, supplier ledger
<b>-11</b>	partial payment, supplier ledger
<b>-12</b>	difference, supplier ledger
<b>-13</b>	cash discount, supplier ledger
<b>-14</b>	matching, supplier ledger
<b>-15</b>	currency profit, supplier ledger
<b>-16</b>	currency loss, supplier ledger

2)

Value	Comment
<b>0</b>	invoice type does not trigger generation of interests
<b>1</b>	invoice type can trigger generation of interests

## Get method : /api/invoice/get-invoicestatus

Returns the invoice statuses that were changes since the last time the endpoint was called.

Field	Datatype	Comment
invoiceSerie	String	8
invoiceNumber	String	Invoice number
status	Int	1)

1)

Value	Comment
0	preliminary invoice
1	booked invoice
2	printed invoice

## Get method : /api/invoice/get-paidstatus

Returns the invoice statuses that were changes since the last time the endpoint was called.

Inputfield	Datatype	Comment
<b>startDate</b>	Datetime	

Field	Datatype	Size	Comment
<b>invoiceSerie</b>	String	8	Invoice serie
<b>invoiceNumber</b>	String		Invoice number
<b>status</b>	Int		1)

1)

Value	Comment
<b>0</b>	preliminary invoice
<b>1</b>	booked invoice
<b>2</b>	printed invoice

## Ledger

Get method : /api/ledger/get-supplierledger

This method will return a supplier ledger.

Inputfield	Datatype	Size	Comment
<b>serie</b>	String	8	Invoice serie
<b>invno</b>	Int		Invoice number

Field	Datatype	Size	Comment
<b>vatcode</b>	Byte		Vat code
<b>serie</b>	String	8	Invoice serie
<b>ocr</b>	String	100	Ocr number
<b>year</b>	Short		Year
<b>remfee</b>	Decimal	28,8	Reminder fee for ledger
<b>account</b>	String		Account receivable for sales ledger / account payable for supplier ledgers
<b>differens</b>	Decimal	28,8	Difference
<b>usedcd</b>	Decimal	28,8	Used cash discount
<b>status</b>	Byte		0 – open, 1 – printed, 2 – ready for autopayment
<b>code</b>	Byte		0 – normal ledger, 1 – arrival registered, 2 – to be reported back, 3 – payment proposal
<b>xlevel</b>	Byte		Reminder level for sales ledgers
<b>blocked</b>	Byte		Blocked for reminders / payments
<b>bookdate</b>	Datetime		Accounting date
<b>invdate</b>	Datetime		Invoicing date
<b>type</b>	Short		Ledger type. See method /api/invoice/get-types
<b>itype</b>	Short		Internal type. -1 for supplier ledgers / 1 for customer ledgers
<b>enumerator</b>	String	8	Ledger serie
<b>invno</b>	Int		Invoice number
<b>seq</b>	Byte		Sequential number. The header record is always 0. Sub records have 1-255
<b>fixedexchange</b>	Byte		0 – variable exchange rate, 1 – fixed exchange rate
<b>amount</b>	Decimal	28,8	Amount
<b>interestblocked</b>	Byte		1)
<b>person</b>	String	12	Customer / Supplier. Must exist in person table
<b>payer</b>	String	12	Payer
<b>payee</b>	String	12	Payee
<b>receive</b>	String	12	Invoice recipient
<b>mop</b>	String	8	Mode of payment
<b>rop</b>	String	8	Payee mode of payment
<b>group1</b>	String	8	Free group of group type LEDGER1
<b>group2</b>	String	8	Free group of group type LEDGER2
<b>freetext</b>	String	80	Free text
<b>approval1</b>	String	8	First approval. Refers to signature
<b>approval2</b>	String	8	Second approval. Refers to signature
<b>logno</b>	Int		Log number for ledger. Refers to voulog.logno
<b>foramount</b>	Decimal	28,8	Foreign amount
<b>vat</b>	Decimal	28,8	Vat amount
<b>org</b>	String	30	Original invoice number
<b>extraid</b>	String	30	Extra id
<b>duedate</b>	Datetime		Due date
<b>interestduedate</b>	Datetime		Interest due date
<b>paydate</b>	Datetime		Final payment date
<b>lastinterest</b>	Datetime		Last interest calculation date
<b>lastinternal</b>	Datetime		Last internal interest calculation date
<b>claimdate</b>	Datetime		Last reminders booking date for sales ledgers / arrival date for supplier ledgers
<b>currency</b>	String	3	Currency
<b>o1</b>	String	8	Object of type 1
<b>o2</b>	String	8	Object of type 2
<b>o3</b>	String	8	Object of type 3
<b>o4</b>	String	8	Object of type 4
<b>o5</b>	String	8	Object of type 5
<b>o6</b>	String	8	Object of type 6

<b>o7</b>	String	8	Object of type 7
<b>o8</b>	String	8	Object of type 8
<b>note</b>	String	255	Internal note for ledger
<b>interest</b>	String	8	Interest procedure
<b>vouno</b>	Int		Voucher number
<b>bankcode</b>	String	8	Central bank code of group type BANKCODE
<b>tradecode</b>	Int		Commercial code
<b>payform</b>	String	8	Pay form of group type PAYFORM
<b>feecode</b>	String	8	Fee code of group type FEECODE
<b>discount</b>	String	8	Cash discount
<b>cid</b>	String	8	Company

1)

Value	Comment
<b>0</b>	interest can be calculated for the ledger
<b>1</b>	interest can not be calculated for the ledger

## Get method : /api/ledger/get-salesledger

This method will return a sales ledger.

Inputfield	Datatype	Size	Comment
serie	String	8	Invoice serie

o8	String	8	Object of type 8
doPeriodAllocation	Bool		True – create period allocation, false – do not create period allocation
periodAllocationStartDate	Datetime		Period allocation start date
periodAllocationEndDate	Datetime		Period allocation end date
periodAllocationAccount	String	6	Periodic allocation account

Field	Datatype	Size	Comment
success	Bool		True – successful, false – not successful
result:			
ledgerSerie	String	8	Invoice serie
invno	Int		Invoice number
voucherSerie	String	8	Voucher serie
voucherNumber	Int		Voucher number
reversedVoucherSerie	String	8	Reversed voucher serie
reversedVoucherNumber	Int		Reversed voucher number
preliminaryAsset	Bool		True – preliminary asset was created, false - preliminary asset was not created
periodicAllocation	Int		Periodic Allocation
errorMessage	String		Error message

## Post method : /api/ledger/create-customer-ledger

This method creates a customer ledger and creates a voucher.

Inputfield	Datatype	Size	Comment
<b>LedgerSerie</b>	String	8	Ledger serie
<b>Invno</b>	Int		Invoice number
<b>VoucherSerie</b>	String	8	Voucher serie
<b>VatCode</b>	Byte		Vat code
<b>Vataccount</b>			Vat account
<b>Amount</b>	Decimal	28,8	Vat amount
<b>ForeignAmount</b>	Decimal	28,8	Foreign amount
<b>Currency</b>	String	3	Currency
<b>Cid</b>	String	8	Company
<b>Customerid</b>	String	12	Customer id
<b>IncomeAccount</b>	String	6	Account
<b>CustomerAccount</b>			Account
<b>BookDate</b>	Datetime		Accounting date
<b>InvoiceDate</b>	Datetime		Invoice date
<b>o1</b>	String	8	Object of type 1

<b>o5</b>	String	8	Object of type 5
<b>o6</b>	String	8	Object of type 6
<b>o7</b>	String	8	Object of type 7
<b>o8</b>	String	8	Object of type 8
<b>LedgerRow</b>			
<b>amount</b>	Decimal		Amount
<b>foramount</b>	Decimal		Foreign amount
<b>VatAccount</b>	String	6	Account
<b>VatCode</b>	Byte		Vat code

Field	Datatype	Size	Comment
<b>LedgerSerie</b>	String	8	Ledger serie
<b>Invno</b>	Int		Invoice number
<b>VoucherSerie</b>	String	8	Voucher serie
<b>VoucherNumber</b>	Int		Voucher number
<b>PeriodicAllocation</b>	Int		

Post method : /api/ledger/block-supplier-ledger

This method will block a ledger record for payments.

Inputfield	Datatype	Size	Comment
<b>InvoiceSerie</b>	String	8	Ledger serie
<b>InvoiceNumber</b>	Int		Invoice number
<b>Blocked</b>	Bool		Blocked = true; Not blocked = false

## Get method : /api/ledger/get-paid-ledgers

This method returns a list of ledgers.

Inputfield	Datatype	Comment
patDateStart	Datetime	Gets ledgers greater than or equal to startdate

Field	Datatype	Size	Comment
vatcode	Byte		Vat code
serie	String	8	Invoice serie
ocr	String	100	Ocr number
year	Short		Year
remfee	Decimal	28,8	Reminder fee for ledger
account	String		Account receivable for sales ledger / account payable for supplier ledgers
differens	Decimal	28,8	Difference
usedcd	Decimal	28,8	Used cash discount
status	Byte		0 – open, 1 – printed, 2 – ready for autopayment
code	Byte		0 – normal ledger, 1 – arrival registered, 2 – to be reported back, 3 – payment proposal
xlevel	Byte		Reminder level for sales ledgers
blocked	Byte		Blocked for reminders / payments
bookdate	Datetime		Accounting date
invdate	Datetime		Invoicing date
type	Short		Ledger type. See method /api/invoice/get-types
itype	Short		Internal type. -1 for supplier ledgers / 1 for customer ledgers
enumerator	String	8	Ledger serie
invno	Int		Invoice number
seq	Byte		Sequential number. The header record is always 0. Sub records have 1-255
fixedexchange	Byte		0 – variable exchange rate, 1 – fixed exchange rate
amount	Decimal	28,8	Amount
interestblocked	Byte		1)
person	String	12	Customer / Supplier. Must exist in person table
payer	String	12	Payer
payee	String	12	Payee
receive	String	12	Invoice recipient
mop	String	8	Mode of payment
rop	String	8	Payee mode of payment
group1	String	8	Free group of group type LEDGER1
group2	String	8	Free group of group type LEDGER2
freetext	String	80	Free text
approval1	String	8	First approval. Refers to signature
approval2	String	8	Second approval. Refers to signature
logno	Int		Log number for ledger. Refers to voulog.logno
foramount	Decimal	28,8	Foreign amount
vat	Decimal	28,8	Vat amount

<b>o5</b>	String	8	Object of type 5
<b>o6</b>	String	8	Object of type 6
<b>o7</b>	String	8	Object of type 7
<b>o8</b>	String	8	Object of type 8
<b>note</b>	String	255	Internal note for ledger
<b>interest</b>	String	8	Interest procedure
<b>vouno</b>	Int		Voucher number
<b>bankcode</b>	String	8	Central bank code of group type BANKCODE
<b>tradecode</b>	Int		Commercial code
<b>payform</b>	String	8	Pay form of group type PAYFORM
<b>feecode</b>	String	8	Fee code of group type FEECODE
<b>discount</b>	String	8	Cash discount
<b>cid</b>	String	8	Company

Delete method : /api/ledger/delete-ledger

This method deletes a ledger.

Inputfield	Datatype	Size	Comment
serie	String	8	Invoice serie
invno	Int		Invoice number
ledgerType	PersonEnumType		-1 – Supplier, 1 – Customer, 3 – FixedAsset

Field	Datatype	Comment
success	Bool	true – successful, false – not successful
result	Int	
errorMessage	String	Error message

## Misc

Get method : /api/misc/get-labels

This method will return a list of labels. Used for accountclasses and accountgroups.

Field	Datatype	Size	Comment
labelNo	String	4	Label id
labelCaption	String	80	Name

Get method : /api/misc/get-imsettings

This method will return a list of DCE settings.

Field	Datatype	Size	Comment
<b>id</b>	String	20	Settings id
<b>value</b>	String	200	Setting

Get method : /api/misc/get-controlsettings

This method will return Control settings.

Field	Datatype	Size	Comment
<b>defaultCompany</b>	String	8	Default company
<b>baseCurrency</b>	String	3	Domestic currency
<b>countryCode</b>	String	8	Country code
<b>amountPrecision</b>	Byte		Number of digits after the amounts
<b>exchangePrecision</b>	Byte		Number of digits after the exchange rates
<b>numberPrecision</b>	Byte		Number of digits after the numbers

## Get method : /api/misc/get-coderelations

This method returns a list of coderelations.

Field	Datatype	Size	Comment
<b>cid</b>	String	8	The company the rule applies to
<b>account</b>	String	6	Rule applies to this selection of accounts
<b>o1</b>	String	50	Rule applies to this selection of objects of type 1
<b>o2</b>	String	50	Rule applies to this selection of objects of type 2
<b>o3</b>	String	50	Rule applies to this selection of objects of type 3
<b>o4</b>	String	50	Rule applies to this selection of objects of type 4
<b>o5</b>	String	50	Rule applies to this selection of objects of type 5
<b>o6</b>	String	50	Rule applies to this selection of objects of type 6
<b>o7</b>	String	50	Rule applies to this selection of objects of type 7
<b>o8</b>	String	50	Rule applies to this selection of objects of type 8
<b>locked</b>	Byte		0 – allowed combination, 1 – locked combination
<b>fromdate</b>	Datetime		Rule applies from this date
<b>todate</b>	Datetime		Rule applies up to this date
<b>errortext</b>	String	255	Message to be shown when the locked combination is invoked

## Get method : /api/misc/get-calendar

This method returns a list of calendar items. The calendar is used to list the days that can't be used as banking days.

Field	Datatype	Size	Comment
<b>year</b>	Short		Calendar year
<b>month</b>	Byte		Mounth
<b>Day</b>	Short		Day
<b>Name</b>	String	100	Name of the holiday

# Object

Get method : /api/object/get-objects

This method returns a list of objects.

Inputfield	Datatype	Comment
<b>no</b>	Int	Object type. 1 – 8
<b>page</b>	Int	Page to get. Default page is 0

Field	Datatype	Size	Comment
<b>no</b>	Byte		Object type. 1 – 8
<b>name</b>	String	30	Object name
<b>objectId</b>	String	8	Object id
<b>businessUnit</b>	String	8	Company. Can be null
<b>userGroup1</b>	String	8	Free group of group type OBJECT{no}-1
<b>userGroup2</b>	String	8	Free group of group type OBJECT{no}-2
<b>userGroup3</b>	String	8	Free group of group type OBJECT{no}-3
<b>userGroup4</b>	String	8	Free group of group type OBJECT{no}-4
<b>userGroup5</b>	String	8	Free group of group type OBJECT{no}-5
<b>userGroup6</b>	String	8	Free group of group type OBJECT{no}-6
<b>userGroup7</b>	String	8	Free group of group type OBJECT{no}-7
<b>userGroup8</b>	String	8	Free group of group type OBJECT{no}-8
<b>userGroup9</b>	String	8	Free group of group type OBJECT{no}-9
<b>userGroup10</b>	String	8	Free group of group type OBJECT{no}-10
<b>userGroup11</b>	String	8	Free group of group type OBJECT{no}-11
<b>userGroup12</b>	String	8	Free group of group type OBJECT{no}-12
<b>userGroup13</b>	String	8	Free group of group type OBJECT{no}-13
<b>userGroup14</b>	String	8	Free group of group type OBJECT{no}-14
<b>userGroup15</b>	String	8	Free group of group type OBJECT{no}-15
<b>userGroup16</b>	String	8	Free group of group type OBJECT{no}-16
<b>userGroup17</b>	String	8	Free group of group type OBJECT{no}-17
<b>userGroup18</b>	String	8	Free group of group type OBJECT{no}-18
<b>userGroup19</b>	String	8	Free group of group type OBJECT{no}-19
<b>userGroup20</b>	String	8	Free group of group type OBJECT{no}-20
<b>o1</b>	String	8	Standard object of type 1
<b>o2</b>	String	8	Standard object of type 2
<b>o3</b>	String	8	Standard object of type 3
<b>o4</b>	String	8	Standard object of type 4
<b>o5</b>	String	8	Standard object of type 5
<b>o6</b>	String	8	Standard object of type 6
<b>o7</b>	String	8	Standard object of type 7
<b>o8</b>	String	8	Standard object of type 8
<b>objectBegin</b>	Datetime		Valid from date
<b>objectEnd</b>	Datetime		Valid to date
<b>balanced</b>	Byte		0 – object is not balanced, 1 – object is balanced
<b>balancedDirect</b>	Byte		0 – object is not directly balanced, 1 – object is directly balanced
<b>action</b>	Datetime		Change date
<b>o1Relation</b>	Int		1)
<b>o2Relation</b>	Int		1)
<b>o3Relation</b>	Int		1)
<b>o4Relation</b>	Int		1)
<b>o5Relation</b>	Int		1)
<b>o6Relation</b>	Int		1)
<b>o7Relation</b>	Int		1)
<b>o8Relation</b>	int		1)
<b>pageNumber</b>	Int		Page to fetch
<b>isComplete</b>	Bool		True – more pages to fetch

1)

Value	Comment
<b>0</b>	0 – object can never be used with objects of type 1.
<b>1</b>	1 – object can be used with objects of type 1.
<b>2</b>	2 – object must be used with objects of type 1.

## Get method : /api/object/get-object-by-id

This method returns an object.

Inputfield	Datatype	Size	Comment
<b>no</b>	Int		Object id
<b>objectName</b>	String	30	Object name

Field	Datatype	Size	Comment
<b>no</b>	Int		Object type. 1 – 8
<b>name</b>	String	30	Object name
<b>objectId</b>	String	8	Object id
<b>businessUnit</b>	String	8	Company. Can be null
<b>userGroup1</b>	String	8	Free group of group type OBJECT{no}-1
<b>userGroup2</b>	String	8	Free group of group type OBJECT{no}-2
<b>userGroup3</b>	String	8	Free group of group type OBJECT{no}-3
<b>userGroup4</b>	String	8	Free group of group type OBJECT{no}-4
<b>userGroup5</b>	String	8	Free group of group type OBJECT{no}-5
<b>userGroup6</b>	String	8	Free group of group type OBJECT{no}-6
<b>userGroup7</b>	String	8	Free group of group type OBJECT{no}-7
<b>userGroup8</b>	String	8	Free group of group type OBJECT{no}-8
<b>userGroup9</b>	String	8	Free group of group type OBJECT{no}-9
<b>userGroup10</b>	String	8	Free group of group type OBJECT{no}-10
<b>userGroup11</b>	String	8	Free group of group type OBJECT{no}-11
<b>userGroup12</b>	String	8	Free group of group type OBJECT{no}-12
<b>userGroup13</b>	String	8	Free group of group type OBJECT{no}-13
<b>userGroup14</b>	String	8	Free group of group type OBJECT{no}-14
<b>userGroup15</b>	String	8	Free group of group type OBJECT{no}-15
<b>userGroup16</b>	String	8	Free group of group type OBJECT{no}-16

<b>o8Relation</b>	int		1)

1)

Value	Comment
<b>0</b>	0 – object can never be used with objects of type 1.
<b>1</b>	1 – object can be used with objects of type 1.
<b>2</b>	2 – object must be used with objects of type 1.

Get method : /api/object/get-types

This method returns a list of objecttypes.

Field	Datatype	Size	Comment
<b>no</b>	Int		Object type. 1 – 8
<b>project</b>	Int		1)
<b>container</b>	Int		2)
<b>name</b>	String	10	Object type name

1)

Value	Comment
<b>0</b>	If objects are to be used as expense objects
<b>1</b>	If objects are to be used as project objects

2)

Value	Comment
<b>0</b>	if objects are not included in balancing (container.o{1-8})
<b>1</b>	if objects are included in balancing (container.o{1-8})

## Get method : /api/object/get-objects-by-date

This method returns a list of objects.

Inputfield	Datatype	Comment
startDate	Datetime	Object startdate
endDate	Datetime	Object enddate
page	Int	Page to get. Default page is 0

Field	Datatype	Size	Comment
no	Int		Object type. 1 – 8
name	String	30	Object name

<b>1</b>	1 – object can be used with objects of type 1.
<b>2</b>	2 – object must be used with objects of type 1.

## Period

Get method : /api/period/get-years

This method returns a list of years and numbers of periods.

Field	Datatype	Size	Comment
<b>yearno</b>	Short		Year id (index). First year's index is 1
<b>periodbegin</b>	Datetime		Start date of period
<b>periodend</b>	Datetime		End date of period
<b>locked</b>	Byte		0 – period is unlocked, 1 – period is locked
<b>Name</b>	String	8	Period name

## Get method : /api/period/get-periods

This method returns a list of period information.

Field	Datatype	Size	Comment
<b>yearno</b>	Short		Year id (index). First year's index is 1
<b>period1</b>	Byte		Period number. (0 – for the whole financial year record)
<b>periodbegin</b>	Datetime		Start date of period
<b>periodend</b>	Datetime		End date of period
<b>locked</b>	Byte		0 – period is unlocked, 1 – period is locked
<b>name</b>	String	8	Period name

## PeriodAllocation

Get method : /api/periodallocation/get-periodallocation

This method returns a periodic allocation.

Inputfield	Datatype	Comment
periodAllocationId	Int	Period allocation id

Field	Datatype	Size	Comment
<b>businessUnit</b>	String	8	Company
<b>enumerator</b>	Int		Internal batch number to identify the periodic allocation
<b>describe</b>	String	30	Description
<b>baseAccount</b>	String	6	Base account
<b>startDate</b>	Datetime		Start date
<b>endDate</b>	Datetime		End date
<b>account</b>	String		Account
<b>amount</b>	Decimal	28,8	Amount for allocation
<b>foramount</b>	Decimal	28,8	Foreign amount
<b>number</b>	Decimal	28,8	Number
<b>currency</b>	String	3	Currency
<b>o1</b>	String	8	Object of objkect type 1
<b>o2</b>	String	8	Object of objkect type 2
<b>o3</b>	String	8	Object of objkect type 3
<b>o4</b>	String	8	Object of objkect type 4
<b>o5</b>	String	8	Object of objkect type 5
<b>o6</b>	String	8	Object of objkect type 6
<b>o7</b>	String	8	Object of objkect type 7
<b>o8</b>	String	8	Object of objkect type 8
<b>xFreeText</b>	String	30	Free text
<b>periodicRows</b>			
<b>businessUnit</b>	String	8	Company
<b>enumerator</b>	Int		Internal batch number to identify the periodic allocation
<b>year</b>	Short		Year
<b>period</b>	Byte		Period
<b>amount</b>	Decimal	28,8	Allocated amount
<b>foramount</b>	Decimal	28,8	Allocated foreign amount
<b>number</b>	Decimal	28,8	Allocated number
<b>done</b>	Byte		0 – allocation is not yet done, 1 – allocation is done

## Person

Get method : /api/person/get-customers

This method returns a list of customers.

Inputfield	Datatype	Comment
page	Int	Page to get. Default page is 0

Field	Datatype	Size	Comment
<b>type</b>	Short		Person type, 1 – customer, -1 – supplier
<b>id</b>	String	12	Person id
<b>globaltype</b>	Byte		1)
<b>internaltype</b>	Byte		2)
<b>created</b>	Datetime		Date of creation
<b>changed</b>	Datetime		Date of last modification
<b>noclaim</b>	Byte		Set to 1 if reminders should not be generated
<b>nointerest</b>	Byte		Set to 1 if interests should not be calculated
<b>blocked</b>	Byte		Set to 1 if the customer/supplier is blocked
<b>statement</b>	Byte		Set to 1 for the account statement
<b>creditlimit</b>	Decimal	28,8	Credit limit
<b>creditlimitoff</b>	Decimal	28,8	Allowed overdraft for credit limit
<b>extradays</b>	Short		Wait days after the due date within which the invoice can still be paid
<b>fixedexchange</b>	Byte		Set to 1 if fixed exchange should be used for payments
<b>disabled</b>	Byte		Set to 1 if customer/supplier should not be used
<b>ignoreorginvno</b>	Byte		Setting for original invoice number
<b>gln</b>	String	40	Global Location Number
<b>prop</b>	Int		Property bitmask
<b>uac</b>	Int		User Access Code
<b>totalsaldo</b>	Decimal	28,8	Total balance
<b>pricelist</b>	Byte		Price list that should be used
<b>invoicediscount</b>	Decimal	28,8	Invoice discount
<b>accounttype</b>	Byte		Account that should be used for invoicing
<b>groupinvoice</b>	Byte		Set to 1 if summary invoice is to be used
<b>invoicefee</b>	Decimal	28,8	Invoice fee
<b>extrafee</b>	Decimal	28,8	Administration fee
<b>usefee</b>	Byte		Set to 1 if local invoice fee should be used
<b>useextrafee</b>	Byte		Set to 1 if administration fee should be used
<b>useintfee</b>	Byte		Set to 1 if local interest fee shoud be used
<b>intfee</b>	Decimal	28,8	Interest fee
<b>useremfee</b>	Byte		Set to 1 if reminder fee should be charged from customer
<b>remfee</b>	Decimal	28,8	Reminder fee
<b>discountcol</b>	Int		Discount column for invoicing
<b>mod</b>	String	8	Method of delivery of group type MOD
<b>tod</b>	String	8	Terms of delivery of group type TOD
<b>bankcode</b>	String	8	Central bank code of group type BANKCODE
<b>cashdiscount</b>	String	8	Default cash distount
<b>interest</b>	String	8	Default interest procedure
<b>payer</b>	Byte		Set to 1 if customer is a payer
<b>defpayer</b>	String	12	Default payer
<b>payee</b>	Byte		Set to 1 if customer is a payee
<b>defpayee</b>	String	12	Default payee
<b>receive</b>	Byte		Set to 1 if customer is an invoice recipient
<b>defreceive</b>	String	12	Default invoice resipient
<b>o1</b>	String	8	Object of type 1
<b>o2</b>	String	8	Object of type 2
<b>o3</b>	String	8	Object of type 3
<b>o4</b>	String	8	Object of type 4
<b>o5</b>	String	8	Object of type 5
<b>o6</b>	String	8	Object of type 6
<b>o7</b>	String	8	Object of type 7
<b>o8</b>	String	8	Object of type 8
<b>currency</b>	String	3	Currency

acctabrec	String	8	Account receivable for customer / account payable for supplier
acctabsale	String	8	Sale account / purchase account
contact	String	8	Default contact person
group1	String	8	Group of type CUST1 or SUPP1
group2	String	8	Group of type CUST2 or SUPP2
group3	String	8	Group of type CUST3 or SUPP3
group4	String	8	Group of type CUST4 or SUPP4
group5	String	8	Group of type CUST5 or SUPP5
group6	String	8	Group of type CUST6 or SUPP6
approval1	String	8	Approval 1
approval2	String	8	Approval 2
payform	String	8	Payform of group type PAYFORM
fecode	String	8	Fee code of group type FEECODE
factoring	String	8	Bank that is used for factoring
claimdate	Datetime		Latest reminder date
intdate	Datetime		Lastes calculation of interest
creditresponse	String	8	Credit administrator
action	Datetime		Latest action upon the customer/supplier

group4	String	8	Group of group type BANK4
defBank	Int		0 – not a default bank, 1 – default bank
_id	Int		Internal id
paymentaccount	String	6	Account. This account is used for payment with Autopay
currency	String	3	currency

1)

Value	Comment
0	external customer/supplier
1	concern customer/supplier
2	internal customer/supplier

2)

Value	Comment
0	ordinary customer/supplier
1	prospect
2	template

Field	Datatype	Comment
success	Bool	true – succesful, false – not succesful
result	Int	
errorMessage	String	Errormessage

## UserGroup

Get method : /api/usergroup/get-usergroups

This method returns a list of usergroups.

Field	Datatype	Size	Comment
<b>typename</b>	String	10	Group type
<b>groupname</b>	String	8	Group id
<b>uac</b>	Int		User Access Code
<b>groupdesc</b>	String	20	Description
<b>text</b>	String	80	Free text
<b>pageNumber</b>	Int		Page to fetch
<b>isCompleted</b>	Bool		True – more pages to fetch

## Get method : /api/usergroup/get-usergroup

This method returns a usergroup.

Inputfield	Datatype	Size	Comment
<b>typename</b>	String	10	Group type
<b>groupname</b>	String	20	Group id

Field	Datatype	Size	Comment
<b>typename</b>	String	10	Group type
<b>groupname</b>	String	8	Group id
<b>uac</b>	Int		User Access Code
<b>groupdesc</b>	String	20	Description
<b>text</b>	String	80	Free text

Get method : /api/usergroup/get-usergroupbytype

This method returns a usergroup.

Inputfield	Datatype	Size	Comment
<b>typename</b>	String	10	Group type

Field	Datatype	Size	Comment
<b>typename</b>	String	10	Group type
<b>groupname</b>	String	8	Group id
<b>uac</b>	Int		User Access Code
<b>groupdesc</b>	String	20	Description
<b>text</b>	String	80	Free text

## Voucher

Get method : /api/voucherlog/get-voucherlog-by-Id

This method returns a voucher log.

Inputfield	Datatype	Size	Comment
vouno	Int		Voucher number
serie	String	8	Voucher serie
year	Int		Year number

Field	Datatype	Size	Comment
<b>businessUnit</b>	String	8	Company
serie	String	8	Voucher serie
vouNo	Int		Voucher number
Type	short		Ledger type
enumerator	String	8	Invoice serie
invno	Int		Invoice number
voucherDate	Datetime		Voucher date
userid	String	30	User id
userGroup1	String	8	Group type of type VOUCHER1
userGroup2	String	8	Group type of type VOUCHER2
freeText	String	80	Free text
transferlog	Bool		Not use here
checkRule	Byte		Not used here
<b>rows:</b>			
account	String	6	Account
amount	Decimal	28,8	Amount
foramount	Decimal	28,8	Foreign amount
currency	String	3	Currency
number	Decimal	2838	Quantity
freeText	String	80	Freetext
o1	String	8	Object of type 1
o2	String	8	Object of type 2
o3	String	8	Object of type 3
o4	String	8	Object of type 4
o5	String	8	Object of type 5
o6	String	8	Object of type 6
o7	String	8	Object of type 7
o8	String	8	Object of type 8
group1	String	8	Free group of type VOUROW1
group2	String	8	Free group of type VOUROW2
group3	String	8	Free group of type VOUROW3
group4	String	8	Free group of type VOUROW4
vatCode	Short		Vat code

## Post method : /api/voucherlog/create-voucherlog

This method creates a voucher log.

Inputfield	Datatype	Size	Comment
<b>businessUnit</b>	String	8	Company
<b>serie</b>	String	8	Voucher serie
<b>vouNo</b>	Int		Voucher number
<b>type</b>	Short		Ledger type
<b>enumerator</b>	String	8	Invoice serie
<b>invno</b>	Int		Invoice number
<b>voucherDate</b>	Datetime		Voucher date
<b>userid</b>	String	30	User id
<b>userGroup1</b>	String	8	Group type of type VOUCHER1
<b>userGroup2</b>	String	8	Group type of type VOUCHER2
<b>freeText</b>	String	80	Free text
<b>transferlog</b>	Bool		True – transfer, false – do not transfer
<b>checkRule</b>	Byte		0 – do not check rules on transfer, 1 – check rules on transfer
<b>deleteaftertransfer</b>	Bool		False – No delete, True = delete after transfer
<b>rows:</b>			
<b>account</b>	String	6	Account
<b>amount</b>	Decimal	28,8	Amount
<b>foramount</b>	Decimal	28,8	Foreign amount
<b>currency</b>	String	3	Currency
<b>number</b>	Decimal	28,8	Quantity
<b>freeText</b>	String	80	Freetext
<b>o1</b>	String	8	Object of type 1

<b>o4</b>	String	8	Object of type 4
<b>o5</b>	String	8	Object of type 5
<b>o6</b>	String	8	Object of type 6
<b>o7</b>	String	8	Object of type 7
<b>o8</b>	String	8	Object of type 8
<b>group1</b>	String	8	Free group of type VOUROW1
<b>group2</b>	String	8	Free group of type VOUROW2
<b>group3</b>	String	8	Free group of type VOUROW3
<b>group4</b>	String	8	Free group of type VOUROW4
<b>vatCode</b>	Short		Vat code

Field	Datatype	Size	Comment
<b>logno</b>	Int		Log number
<b>logtype</b>	Short		1)
<b>logdate</b>	Datetime		Accounting date
<b>type</b>	Short		Ledger type
<b>invno</b>	Int		Invoice number
<b>seq</b>	Byte		Ledger sequential number
<b>year</b>	Short		Year number
<b>period</b>	Byte		Period number
<b>serie</b>	String	8	Voucher serie
<b>pack</b>	Byte		Set to 1 if identical rows should be bundled together
<b>timestamp</b>	Timestamp		Timestamp
<b>vouno</b>	Int		Voucher number
<b>groupno</b>	Int		Batch number
<b>xfretext</b>	String	80	Free text
<b>group1</b>	String	8	Group type of type VOUCHER1
<b>group2</b>	String	8	Group type of type VOUCHER2
<b>userid</b>	String	30	User id
<b>enumerator</b>	String	8	Invoice serie
<b>cid</b>	String	8	Company
<b>status</b>	Short		0 – voucherlog, 1 – transferred to voucher, 2 – error
<b>userserie</b>	Byte		Voucher serie

--	--	--	--

1)

Value	Comment
1	user-defined
2	accounting
3	sales ledger
4	supplier ledger
5	external system
6	arrival registration

Note:

1. This method will create the voucherlog in one transaction and then after it's imported try to transfer the imported log. If the transfer of the log is not ok the log will still be created and a user can then correct and transfer manually.
2. Do not send many logs at the same time, wait for the result and then send the next one.

## Post method : /api/voucher/create-voucher

This method creates a voucher.

Inputfield	Datatype	Size	Comment
<b>businessUnit</b>	String	8	Company
<b>serie</b>	String	8	Voucher serie
<b>vouNo</b>	Int		Voucher number

## VoucherSerie

Get method : /api/serie/get-series

This method returns a list of voucherseries.

Inputfield	Datatype	Comment
<b>yearno</b>	Int	Year number

Field	Datatype	Size	Comment
<b>nextno</b>	Int		Next number for voucher serie
<b>disabled</b>	Byte		0 – if serie is not locked, 1 – 40 – period until serie is locked
<b>dmy</b>	Byte		1)
<b>freeuse</b>	Byte		Serie does not lock when it is being used
<b>locked</b>	Byte		0 – unlocked, 1 – locked
<b>year</b>	Short		Year number
<b>serie1</b>	String	8	Serie id
<b>type</b>	Short		Container to which vouchers with this serie are aggregated. Used only if dmy value is 3. If dmy is 0, vouchers are aggregated into container 9 (container.type)
<b>nosaldo</b>	Byte		2)
<b>uac</b>	Int		User Access Code
<b>cid</b>	String	8	Company
<b>describe</b>	String	30	Description
<b>userid</b>	String	30	User who can use the voucher serie. NULL if the voucher serie can be used by all users
<b>lockedby</b>	String	30	User who locked the serie
<b>usergroup1</b>	String	8	Free group of group type VOUCHER1
<b>usergroup2</b>	String	8	Free group of group type VOUCHER2

1)

Value	Comment
<b>0</b>	serie for vouchers
<b>1</b>	serie for templates
<b>2</b>	serie for simulations
<b>3</b>	serie for budget

2)

Value	Comment
<b>0</b>	vouchers of this serie must be balanced
<b>1</b>	vouchers of this serie do not require balancing. Used only if dmy value is 3

## Get method : /api/serie/get-userseries

This method returns a list of userseries.

Inputfield	Datatype	Size	Comment
<b>type</b>	Int		1 – voucher series, 2 – ledger/invoice series
<b>company</b>	String	8	Company
<b>userName</b>	String	255	User id. Login id

Field	Datatype	Size	Comment
<b>type</b>	Byte		1 – voucher series, 2 – ledger/invoice series
<b>company</b>	String	8	Company
<b>userName</b>	String	30	User id. Login id
<b>serie0</b>	String	8	Default voucher serie, or ledger serie for invoicing
<b>serie1</b>	String	8	Voucher serie for invoicing, or ledger serie for sales ledgers
<b>serie2</b>	String	8	Voucher serie for customer payments, or ledger serie for supplier ledgers
<b>serie3</b>	String	8	Voucher serie for supplier payments, or ledger serie for interest invoices
<b>serie4</b>	String	8	Voucher serie for arrival registrations
<b>serie5</b>	String	8	Voucher serie for counter-bookings
<b>serie6</b>	String	8	Voucher serie for offsetting balance for objects
<b>serie7</b>	String	8	Voucher serie for periodic allocations
<b>serie8</b>	String	8	Voucher serie for budget
<b>serie9</b>	String	8	Voucher serie for sales ledgers
<b>serie10</b>	String	8	Voucher serie for supplier ledgers
<b>serie11</b>	String	8	Voucher serie for interests
<b>serie12</b>	String	8	Voucher serie for depreciations
